

COMPOSITE TABLEWARE AND METHOD OF MANUFACTURING THE SAME

ABSTRACT OF THE DISCLOSURE

A piece of composite tableware and a method of manufacturing the
5 same, the tableware comprises a main part of an utensil and a handle,
the method is characterized by: the main part including a utility portion
and a handle-connecting portion is integrally shaped, an opening is
provided on an outer end of the handle-connecting portion, a fixing hole
is provided at the opening; the handle is formed by injection shaping,
10 extruding and melting, and is tightly connected to the interior of the
handle-connecting portion through the opening to tightly connect with
the main part. Integrally shaping the tableware makes cleansing the
connecting areas become easier, and injection shaping to connect the
main part and the handle increases the connecting strength. In addition,
15 hollow barrel structure reduces the cost. The method is applicable to
manufacturing of spoons, forks and bottle cap openers etc.
